CCO/PhotoMIX-Company/Pixabay If you have a large garden or lawn at your residence, a Cub Cadet tractor is a wonderful piece of equipment for common maintenance jobs. Cub Cadet has different tractor and utility vehicle types, including:Lawn mowers Snow throwers Golf vehicles With a Cub Cadet tractor or lawn mower, you get a highly versatile and strong vehicle for mowing lawns and performing work around the yard. These tractors stand out for their riding comfort and traction when doing work. When something breaks, however, it can leave you in the lurch, with an unfinished job in front of you. Check the following to quickly troubleshoot and fix your tractor, depending on where the problem is.Troubleshooting Engine ProblemsThe first big problem area with a Cub Cadet tractor is the engine. Typically, you become aware something has gone wrong when the engine seizes or sputters and then goes off. Multiple attempts to start the tractor are unsuccessful. If something like this has occurred, chances are, your tractor's battery has gone flat. If this is the case, you can get it up and running again with a simple battery change.In other cases, something might be clogging your engine. This could happen due to a dirty filter needing replacement. An engine filter replacement might help, along with replacing your Cadet Tractor's engine oil. While you are at it, get the entire engine inspected, to check for other faults with the engine.Cub Cadet Belt ProblemsA second category of common problems that can occur with a Cub Cadet tractor occurs with the tractor's belts. Typically, you will be in the middle of a loan mowing job when one of the tractor's belts breaks. It could be the transmission belt, the deck drive, or sometimes, the belt that drives the blades. Make sure that the tractor is powered off and all parts have cooled down before exploring where the problem is.Once you identify a broken belt, the only viable solution is really just to have the belt replaced. In this case, you can order a replacement belt and do the replacement yourself. Alternatively, you can call in a repair technician from your local area to do the belt replacement for you.Cost of Replacement Parts for Your Cub Cadet TractorOften, most problems with your tractor can be repaired fast and effectively with a simple part replacement. For little more than the cost of parts and a few hours of installation work, you can have your Cub Cadet tractor running again. Common Cub Cadet part replacement costs are as follows:Mulching blades - \$15 to \$20 Fuel pump - \$30 to \$60 Recoil starter assembly - \$50 to \$60 Tractor belts - \$15 to \$70 With any part replacement, however, it's a good idea to verify that there are no underlying problems with your tractor beyond the part your replaced. This will need a qualified eye to ascertain. Problems in one area that keep recurring may sometimes be due to a problem elsewhere on your tractor. For example, some customers have had recurring belt problems which turned out to be caused by improper pulley alignment. A professional can identify such problems and get them fixed for you.Finding a Parts DealerWhether you need new parts for your Cub Cadet tractor, or need to find a qualified repair technician, you can search the Cub Cadet website for a dealer near you. Cub Cadet authorized dealers are the qualified, authoritative source of genuine parts and repairs. If you would rather get the parts through the mail, you can order directly from Cub Cadet's website. For bulk orders, Cub Cadet will even ship your order all the way around the country for free. If you're not cutting your grass with a decent blade, it's going to take a lot longer than it should to do your whole lawn. Unlike changing the blades on a walk-behind mower, changing the blades on a riding mower typically requires you to disassemble multiple parts. On the Cub Cadet LTX1045 mower, you'll have to remove the entire cutting deck to inspect the blade. Safety Steps To prevent accidental starts, disconnect the spark plug wire. Drive the mower onto a flat surface and then turn it off, pull out the ignition key and engage the parking brake. Allow the engine to cool completely, and then locate the spark plug wire, which will be coming out of the mower's engine. Pull off the L-shaped boot connected to the spark plug. To ensure that the boot won't slip back onto the spark plug, use a little bit of duct tape to tape it away from the spark plug while you're working. Remove Belt Guard Move the mower deck to the lowest position by adjusting the deck lift lever, located just to the right of your mower's seat, to the bottom notch. The PTO or "Blade Engage" lever should also be in the disengaged or "Off" position. Locate the belt guard, a piece of metal with a square bottom that is surrounding a belt and pulley. Remove the two hex screws that secure the belt guard, and then pull the belt guard to the right to remove it. Remove Cutting Deck Locate the two J-shaped pins on the left and right sides of the tractor, which hold the cutting deck in place. Carefully pull out the pin on the right side of the tractor, and then the left side. Adjust the mower deck lever to the highest position. Look at the back of the cutting deck and pull out the cotter pin that is securing the "Deck Engage" cable to the deck. This cable is attached to a spring; once the cotter pin is pulled, remove the spring and set it aside. Remove the cotter pin that is attached to the stabilizer rod, and then pull out the entire cutting deck from the right side of the machine. Inspect Cutting Blade Turn the deck over to see the cutting blade. The blade is attached to the deck with a hex nut at the center of the blade. If the blade is not significantly damaged, you may only need to sharpen it instead of replacing it. Clean off any grass or debris from the blade and inspect it. If you think it needs replacing after inspecting it, remove the hex nut with a ratcheting wrench. Replace the blade with a new one and then put the cutting deck back on the machine.
